Background to Perilya

Perilya Limited is an ASX 200 Australian base metals mining and exploration company.

The company is expanding its operations at the iconic Broken Hill mine through the development of an exploration decline at Potosi, re-developing the North Mine via a development decline, conducting an open pit feasibility study into the Flying Doctor deposit and conducting exploration within a ten kilometer radius of the concentrator.

The company is targeting early development of its 203,000 tonne Mount Oxide copper project in the Mt Isa region in Queensland.

The company is also investing in the development of the Flinders zinc silicate project in South Australia, with approximately 108,000 tonnes of contained zinc stockpiled from its Beltana deposit and evaluation of nearby deposits including the Reliance deposit are being progressed.

Perilya has a strong balance sheet with low debt levels and is actively seeking growth through a proposed merger with CBH Resources Limited, which will create a globally significant producer of zinc and lead concentrates.
