Water Quality Monitoring

Water Quality Assessment

Perilya Broken Hill Limited (PBHL) makes every effort to reduce contamination of waters. PBHL's water quality monitoring program is a demonstration of this commitment.

A key component of this program is implementation of a routine water quality sampling program. Both the sampling and sample handling are conducted in accordance with the Australian/New Zealand Standard, AS/NZS 5667.1:1998. Samples are also transported under Chain of Custody protocols and delivered to a NATA accredited laboratory for analyses.

Environmental Protection License (EPL) 2688 stipulates that water quality must be monitored when waters are discharging from two nominated points, Point 1 and Point 2, which are located on the Southern Operation.

Water discharged from the Southern Operations site reports to waterways that traverse pastoral and other mining leases. In keeping with the EPL; inorganics, alkali and heavy metals are monitored in waters discharged from this site. The reference used for heavy metals is the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (2002). Results, as determined by the EPL, are reported to the EPA.

EPL2683 does not provide release points for waters at either the Northern Mine or Potosi sites. Structures are in place to intercept and contain site waters and prevent their release off-site to the environment. Passage of non-site water entering both sites is provided by drainage pipe and lined culvert system at North Mine for waters entering the site from the McCullough Street drain and a stream diversion for Mulga Creek that traverses the Potosi mine site. Both the McCullough Street and Mulga Creek through-pass systems convey non-site waters through their respective mine site, maintaining separation between non-site waters and site waters.

Results

Table 1 presents a daily breakdown of the water discharged from Point 1 on the Southern Operations site. A total of zero (0) megalitres (ML) was discharged for the month which is well below the EPL license discharge of 76 ML/month.

Table 1. Volume of water discharged from Point 1 (EPL 2688).

Site	Monitoring frequency required by licence	Sample Date	Discharge (ML)	Cumulative megalitres per year	Limit (ML/year)
Point 1	Continuous	2012/09/30		902.27	912

NR = Logger did not log.

Table 2 presents the water quality limits that have been provided in the license. No discharges occurred from the license points, thus no water samples were taken.

Table 2. EPL water quality limits and results from waters discharged from license points, Point 1 and Point 2 (EPL2688).
